

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

MARCH 1.

MR. FRANK J. KEELEY in the Chair.

Fourteen persons present.

JOHN H. HARSHBERGER, Ph.D., made a communication on the physiognomy of North American vegetation. (No abstract.)

MARCH 15.

MR. CHARLES MORRIS in the Chair.

Nineteen persons present.

The reception of a paper entitled "Spermatogenesis in Lepidoptera," by Margaret Harris Cook, was reported by the Publication Committee.

THOMAS H. MONTGOMERY, Ph.D., made a communication on a study of sexual selection as embodied in his observations on spiders. (No abstract.)

Thamnophis butleri again in Pennsylvania.—MR. HENRY W. FOWLER remarked that on July 3, 1907, he had secured an example of this species at Warren, in Warren County. As it has not before been recorded from this part of the State, this record may prove of interest, though specimens have been secured as far east as Port Allegheny in McKean County, as recorded by Stone, and later by Ruthven. Cope originally obtained Pennsylvanian specimens near Franklin, in Venango County, and described them as *Eutaenia brachystoma*.

The following was ordered to be printed:
